When 20K material is not good enough....

Most Original Equipment Manufacturers are standard with a 20,000 lb. rated lining on 20,000 rated axles. Many of these trucks and trailers are working in applications where the variability of terrain, load and duty cycle ranges from moderate to heavy. This means this equipment is often running hills & mountains and/or hauling close to GAWR and/or has frequent stops. Therefore the 20K rated lining will often be short on stopping power and not delivering good wear. Typically this will be visible as heat checks in the lining.

OTR has the solution, a premium 23,000 lb. material

Benefits of OTR Red:

- A unique combination of raw materials that balance extra stopping power with excellent drum wear.
- Thrives in brake temperatures 30% higher than 20K OEM materials.
- Great versatility for a wide variety of applications to deliver excellent mileage.

A few of our fleet customers said it best:

"Since we started using OTR4707 RED we no longer have issues with rust jacking and cracked lining. And it has excellent braking power."

Ray Gale
Maintenance Operations Mgr.
Gypsum Express
Baldwinsville, New York

"We have used OTR RED shoes for about 5 years and have been pleased with the service and performance. We haul long distance as well as a lot of weight and OTR RED shoes have met our standards."

Mike Sims
Parts Manager
Tennessee Steel Haulers
Cofield, North Carolina

"The OTR4707 RED has good wear, great stopping power and we get longer drum life."

Bob Hurd
Transportation Supervisor
Xpress Transport
Oswego, New York

So when your 20,000 lb. lining is not meeting your expectations, you might try what Ray, Mike and Bob did. **OTR RED** was their solution.

OTR FRICTION is the SMART choice
because there's NO TIME FOR DOWNTIME.
