

1000 Series AutoSlacks

P/N: L1049SB

OTR introduces the 1000 Series Automatic Brake Adjuster for the top 6 applications. The OTR 1000 Series provides the durability and precision adjustment needed for optimum brake performance. Here's how:

- ▶ Clearance sensing adjusts on the release stroke which avoids over-adjustment from deflection of other brake system components and thermal expansion.
- ▶ More gradual adjustment than Meritor® or Bendix® reduces over-adjustment from multiple brake applications while descending a steep grade.
- ▶ External "ARROW" indicator simplifies installation eliminating cumbersome templates.
- ▶ External control arm eliminates design specific clevis reducing installation time and replacement clevis cost.
- ▶ Internal O-Rings protect fully internal adjusting mechanism from contamination to provide longer life. Competitive designs expose the linkage rod and boot.
- ▶ Adjusting on release stroke is less stressful to the adjusting mechanism which extends life.

P/N	Cam Diameter	Splines	Arm Length	Haldex® Cross
OTR10140	1.5"	28	5", 6"	400-10140
OTR10141	1.5"	28	5.5", 6.5"	400-10141
OTR10143	1.5"	10	5.5", 6.5"	400-10143
OTR10144	1.5"	28	6"	400-10144
OTR10211	1.5"	28	5.5"	400-10211
OTR10212	1.5"	28	6"	400-10212

OTR 1000 Series Auto Slacks are the SMART choice to meet the high demands of today's braking systems because there's NO TIME FOR DOWNTIME
